

# Often Imitated! Never Duplicated!

## The “ORIGINAL RPI Hook”

- The **RPI Hook** is the most versatile Escape Hook available on the market!
- While many escape hooks try to function similarly, the **RPI Hook** is the fastest hook to use in the worst possible scenario when seconds count! It is designed to function as a carabiner and a hook.
- **SIZE DOES MATTER!** With zero visibility and while wearing firefighting gloves, size is key for the firefighter to be able to FEEL his ability to tie off and anchor correctly. Everything starts with the hook and anchor!
- The opening of the **RPI Hook** is designed to accommodate commonly found firefighting hand tools such as a Halligan, Roof Hook, Officer's Tool, etc. The opening also allows for the ease of tying off and can be used to help secure the hook while exiting the structure.
- The **RPI Hook** is often imitated but never duplicated! The **RPI Hook** was designed by a firefighter to save firefighter lives!
- UL Tested and Classified to NFPA 1983, 2012 ed. to the Technical-Use Auxiliary Equipment Standard and the Escape Portable Anchor Standard.
- MBS 22 kN (4946 lbf.) (Tested at the Tip of the Hook)
- U.S. Patents 7,942,241 and 8,261,877 additional Pat Pend.
- Weight 11.4 oz.

(Actual Size)
